AscndLabs AI Builders

What they do · How to use them · Why these upgrades matter

The big idea: Affiliates need two things to start earning — a clear program to join, and something concrete to promote. These two AI tools cover both: **Program Launcher** builds and publishes your affiliate program; **Product Studio** creates digital products your partners can sell with tracked links and automatic commission.

Why these upgrades were added

Before, you could generate a program draft and a product, but the affiliate side was incomplete — links didn't clearly pay partners on product sales, and the screens didn't guide you from "idea" to "partners selling." The upgrades close that gap so the product feels like a real affiliate platform, not just an AI writer.

Benefits for you (program owner)

- **Faster launch** — go from website → live program → invite link without writing everything from scratch.
- **Something partners can actually sell** — PDFs/guides/checklists with checkout, not just a signup link.
- **Clear money split** — see affiliate cut vs your keep before you publish a price.
- **Less manual work** — per-affiliate product links + ready invitation copy (copy or email).
- **Visibility** — see which affiliates drive sales and how much commission is owed, per product.

Benefits for your affiliates

- A real offer to promote (product + price + checkout), not vague "join my program."
- Their own tracked link — sales through it count toward their commission.
- Commission follows your program rate automatically when a sale clears.
- Clear program page (preview) so they know rates, cookie length, and what to pitch.

Benefits for getting more users

- Affiliates only promote what they can earn from — tracked product links make that real.
- Owners stay in AscndLabs for create → publish → invite → track, instead of stitching tools together.
- AI lowers the barrier: non-experts can launch a program and a sellable product in one sitting.

1. AI Program Launcher

Sidebar: **AI Program Launcher** · Builds your affiliate program from your website.

What it can do now

- Scan / use your website (plus optional product notes) to draft a full program with AI.
- Generate: program name, description, ideal affiliate profile, promo angles, FAQ, terms.
- Step progress: Website → Draft → Review → Publish → Invite (so you always know what's left).
- **Commission calculator** — pick average order value and monthly sales volume; see what affiliates earn and what you keep.
- **Affiliate preview** — switch Edit / Preview to see the program the way a partner would.
- After publish: **Live program** panel with invite link, commission, cookie days, joined count, and next steps.
- Copy invitation message (with invite link included) and jump to manage affiliates or create a product.

How to use it

1. Open **AI Program Launcher**. Enter your website URL. Optionally add a short product description and notes.
2. Click generate. Wait for the draft (name, copy, FAQ, terms, etc.).
3. Edit anything that looks off. Use **Preview** to check the affiliate-facing version.
4. Use the calculator if you want a quick sense of monthly payouts at your typical sale size.
5. Click **Publish**. Your program is live.

6. From the Live panel: **Copy invite link** (or invitation message) and send it to partners. Then invite affiliates and/or create a product for them to sell.

Why this helps: Owners often stall after “I want an affiliate program.” The launcher turns a URL into a publishable program, then puts invite + next actions in front of you — so partners can join the same day.

2. Product Studio

Sidebar: **Product Studio** · Create digital products affiliates can sell for you.

What it can do now

- Generate products with AI in four formats: **Ebook / PDF**, **Short guide**, **Checklist**, **Workbook**.
- Full document editing: titles, body, lists, images, formatting — click to edit; autosave.
- Ask AI to rewrite any part (“shorter chapter 2”, “add a beginner example”).
- Set price and see live **affiliate vs you** split using your program commission rate.
- Publish a **checkout page** — buyers pay and get the PDF. Download PDF yourself anytime.
- **Per-affiliate tracked links** — every partner gets checkout URL + their ?ref= code. Searchable list.
- Ready **invitation message** to copy or send by email.
- **Performance** on the same page: sales, revenue, sales via affiliates, commission owed, top affiliates, recent sales.
- Product library with status (draft/live) and quick stats so you can reopen and share anytime.

How to use it

1. Open **Product Studio**. Pick a format (ebook, guide, checklist, or workbook).
2. Write the topic, who it’s for, and any extra instructions → **Generate product**.
3. Edit the document. Use formatting tools and images. Use “Ask AI to rewrite” for targeted changes. Edits save automatically.
4. Set the price. Check the split (affiliate / you) so the offer feels fair before you go live.
5. Click **Publish checkout page** (or Update if already live). Copy the customer checkout link if you want to sell it yourself too.
6. Open **Affiliate links**. Copy each partner’s unique link (or send the invitation message).
7. Watch **Performance** as sales come in — who sold, how much commission is owed.

Why this helps: A program without an offer is hard to promote. Product Studio gives affiliates a priced product + their own link + auto commission. You get a library of sellable assets and a clear view of who’s actually driving revenue.

Recommended flow (start to finish)

1. Publish your program (Program Launcher)
2. Invite affiliates (Invite & Affiliates)
3. Create & publish a product (Product Studio)
4. Send each affiliate their tracked product link
5. Track results in Product Studio Performance + Commission Earnings

What changed vs before (in plain language)

- Program Launcher is no longer “just a draft writer” — it includes calculator, affiliate preview, and a clear post-publish invite path.
- Product Studio is no longer “generate a PDF and hope” — affiliates get personal tracked links, and sales through those links create commission.
- You can see product performance (including which affiliates sold) without leaving the studio.
